SUMMARY

I design algorithm of optimization to study cancer genetics, inferring phylogeny for tumor evolution from multiple types of genomic data. I also work on interdisciplinary projects of machine learning (ML) and deep learning (DL), and their applications to cancer genomics. I am interested in studying cancer or other biological fields using bioinformatics, ML and DL.

EDUCATION

Carnegie Mellon University (USA) Aug 2016 - May 2022
Ph.D. in Computational Biology (Mentor: Dr. Russell Schwartz) (expected)
Computational Biology Department, School of Computer Science

M.Sc in Machine Learning, Machine Learning Department, School of Computer Science Aug 2020 - Dec 2021

Huazhong University of Science and Technology (China) Sep 2008 - Jun 2012
B.S. in Biological Science, College of Life Science and Technology

SKILLS

Programming Languages: Python (proficient), R (fluent), MATLAB (fluent), Shell (fluent), Java (familiar)

Technical Skills and Tools: Machine Learning (scikit-learn), Deep Learning (PyTorch, TensorFlow), Bioinformatics (GATK, SAMtools, bedtools CNVkit etc.), Data Analysis (Numpy, Scipy, Pandas), Data Visualization (Matplotlib, Seaborn), Combinatorial Optimization (Gurobi, SCIP), Cloud Computing (AWS), Web Development (HTML/CSS/JS)

WORK EXPERIENCE

Laboratory Corporation of America Holdings (LabCorp) May 2020 - Jul 2020
Bioinformatics Summer Intern Westborough, MA

Converting Free-text Patient Data to ICD Codes using Natural Language Processing (PyTorch, TensorFlow)
- Explored language tools (**BioBERT**, **medaCy**) to annotate and chunk the important information in medical text
- Designed a **two-step BERT** model to predict multiple ICD-10 codes in LabCorp's patient medical text
- Managed to work on a small dataset and reached **84%** on multi-label clarification at chapter level

Benchmarking CNV Detection Tools (Python, R, Perl)
- Tested and compared public CNV detection tools for calling CNVs in targeted NGS data with a very small panel
- Explored combinations of parameters of tools to increase true positive detection in **CNVkit**, **DECoN** & **CoNVaDING**
- Recovered CNVs with a weaker signal in a very small panel of targets with over **94%** in sensitivity and **90%** in specificity

RESEARCH EXPERIENCE

Ph.D. Thesis: Integrating Multiple Data Types to Infer Tumor Evolution (Python, R, MATLAB) May 2017 - Present
- Created a mixed membership model for the **tumor evolution** problem using **bulk** and **single-cell sequencing** data
- Developed an efficient **coordinate descent algorithm** to solve the DNA and RNA deconvolution problem in **Python**
- Designed a **Mixed Integer Linear Programming Model** with the popular optimization solvers of **Gurobi** and **SCIP**
- Designed a comprehensive simulator for multiple types of mutations in DNA-seq data with phylogenetic progress

Function Specific Representational Similarity Inference in the Brain (PyTorch) Spring 2021
- Designed **probabilistic graphical model** for brain fMRI data
- Developed neurons-independent and neurons-dependent network to study function-specific representational similarity
- Recovered similar structure in correlated functional areas in the brain

Detection of Cancer Types and Relevant Features using Deep Learning with RNA-seq Data (PyTorch) Spring 2020
- Designed and fine-tuned **1D CNN**, **2D CNN** and a **hybrid CNN** models to detect cancer types
- Designed a **Stacked Denoising Autoencoder Classifier** to improve the detections (**~96% accuracy**)
- Applied **embedding** method to find implicit relationships between cancer samples and genes

Footprint Match and Pattern Detection using Machine Learning (scikit-learn) Spring 2017
- Classified ~10,000 footprint images with **Neural Network** and **SVM** using **scikit-learn (~95% accuracy)**
- Applied the **Scale-invariant feature transform (SIFT)** algorithm to the match of saved and new images
- Extracted the image patterns with **K-Means** and **Gaussian Mixture Model**

Predict Proto Genes using **Logistic Regression, Naïve Bayes Classifier** and **Decision Tree** Spring 2017
Model Gene Regulatory Network by combining **Boolean network** and **Ordinary Differential Equation** models Fall 2016

TEACHING EXPERIENCE

Algorithm and Advanced Data Structure Aug 2019 - Dec 2019

Algorithms: Breadth-first Search, Depth-first Search, Binary Search, Quick Sort, Merge Sort etc.
Data Structure: Linked List, Graph, Tree, Stack, Queue, Heap, ArrayList, Hash Table etc.
Concepts: Recursion, Dynamic Programming, Time and Space Complexity, NP-problem etc.

Laboratory Methods for Computational Biologists Aug 2018 - Apr 2019

Designed a faster pipeline combining multiple new analysis tools to detect differentially expressed genes in RNA-seq data
