SUMMARY

I design algorithms of optimization to study cancer genetics, inferring phylogeny for tumor evolution from multiple types of genomic data. I also work on interdisciplinary projects of machine learning (ML) and deep learning (DL) on cancer genomics and other datasets. I am looking for a full-time job related to Bioinformatics, Computational Biology, ML, DL and Data Science, etc.

EDUCATION

Carnegie Mellon University (USA) Ph.D. in Computational Biology (Mentor: Dr. Russell Schwartz) Computational Biology Department, School of Computer Science	Aug 2016 - May 2022 (expected)
M.Sc in Machine Learning , Machine Learning Department, School of Computer Science	Aug 2020 - Dec 2021
Huazhong University of Science and Technology (China) B.S. in Biological Science , College of Life Science and Technology	Sep 2008 - Jun 2012

SKILLS

Programming Languages: Python (proficient), R (fluent), MATLAB (fluent), Shell (fluent), Java (familiar)
Technical Skills and Tools: Machine Learning (scikit-learn), Deep Learning (PyTorch, TensorFlow), Bioinformatics (GATK, SAMtools, bedtools, freebayes, CNVkit, etc.), Data Analysis (Numpy, Scipy, Pandas), Data Visualization (Matplotlib, Seaborn), Combinatorial Optimization (Gurobi, SCIP), Cloud Computing (AWS), Web Development (HTML/CSS/JS)

WORK EXPERIENCE¹

Laboratory Corporation of America Holdings (LabCorp) Bioinformatics Summer Intern	May 2020 - Jul 2020 Westborough, MA
Converting Free-text Patient Data to ICD Codes using Natural Language Processing (PyTorch, TensorFlow)	
<ul style="list-style-type: none">Explored language tools (BioBERT, medaCy) to annotate and chunk the important information in medical textDesigned a two-step BERT model to predict multiple ICD-10 codes in LabCorp's patient medical textManaged to work on a small dataset and reached 84% on multi-label clarification at chapter level	
Benchmarking CNV Detection Tools (Python, R, Perl)	
<ul style="list-style-type: none">Tested and compared public CNV detection tools for calling CNVs in targeted NGS data with a very small panelExplored combinations of parameters of tools to increase true positive detection in CNVkit, DECoN & CoNVaDINGRecovered CNVs with a weaker signal in a very small panel of targets with over 94% in sensitivity and 90% in specificity	

RESEARCH EXPERIENCE

Ph.D. Thesis: Integrating Multiple Data Types to Infer Tumor Evolution (Python, R, MATLAB)	May 2017 - Present
<ul style="list-style-type: none">Created a mixed membership model for the tumor evolution problem using bulk and single-cell sequencing dataDeveloped an efficient coordinate descent algorithm to solve the DNA and RNA deconvolution problem in PythonDesigned a Mixed Integer Linear Programming Model with the popular optimization solvers of Gurobi and SCIPDesigned a comprehensive simulator for multiple types of mutations in DNA-seq data with phylogenetic progress	
Function Specific Representational Similarity Inference in the Brain (PyTorch)	Spring 2021
<ul style="list-style-type: none">Designed probabilistic graphical model for brain fMRI dataDeveloped neurons-independent and neurons-dependent network to study function-specific representational similarityRecovered similar structure in correlated functional areas in the brain	
Detection of Cancer Types and Relevant Features using Deep Learning with RNA-seq Data (PyTorch)	Spring 2020
<ul style="list-style-type: none">Designed and fine-tuned 1D CNN, 2D CNN and a hybrid CNN models to detect cancer typesDesigned a Stacked Denoising Autoencoder Classifier to improve the detections (~96% accuracy)Applied embedding method to find implicit relationships between cancer samples and genes	
Footprint Match and Pattern Detection using Machine Learning (scikit-learn)	Spring 2017
<ul style="list-style-type: none">Classified ~10,000 footprint images with Neural Network and SVM using scikit-learn (~95% accuracy)Applied the Scale-invariant feature transform (SIFT) algorithm to the match of saved and new imagesExtracted the image patterns with K-Means and Gaussian Mixture Model	
Predict Proto Genes using Logistic Regression , Naïve Bayes Classifier and Decision Tree	Spring 2017
Model Gene Regulatory Network by combining Boolean network and Ordinary Differential Equation models	Fall 2016

1. Worked as Research Scholar in University of Michigan, Ann Arbor (Sep 2012 - Nov 2015), studied neuroscience in *C.elegans*

TEACHING EXPERIENCE

Algorithm and Advanced Data Structure

Aug 2019 - Dec 2019

Algorithms: Breadth-first Search, Depth-first Search, Binary Search, Quick Sort, Merge Sort etc.

Data Structure: Linked List, Graph, Tree, Stack, Queue, Heap, ArrayList, Hash Table etc.

Concepts: Recursion, Dynamic Programming, Time and Space Complexity, NP-problem etc.

Laboratory Methods for Computational Biologists

Aug 2018 - Apr 2019

Designed a faster pipeline combining multiple new analysis tools to detect differentially expressed genes in RNA-seq data
